

What is claimed is:

1. A mounting assembly for attaching a security sensor having a cable to a product, comprising:

a shroud having a seat for receiving the sensor, said seat orientated to hold the
5 sensor against the product, and an internal passageway, said sensor cable extending
though said internal passageway; and
a fastener extending through said shroud and into said product and fastening both
the sensor and said shroud to the product.

10 2. A mounting assembly as in claim 1, wherein said shroud has an
internal cavity adapted to receive a cable and cable connectors.

3. A mounting assembly as in claim 2, further comprising a sensor on
said seat, a security cable attached to said sensor, a main cable, and a pair of electrical
15 connectors connecting said sensor cable to said main cable, said electrical connectors
being held in said cavity in said shroud.

4. A mounting assembly as in claim 3, wherein said main cable enters
said cavity through a main cable passageway in said shroud, and further comprising a
20 grommet over said main cable and in said main cable passageway.

5. A mounting assembly as in claim 4, said main cable has a braided fabric jacket, and wherein said grommet comprises an elastomeric member on said cable, said braided fabric covering said elastomeric member.

5 6. A mounting assembly as in claim 3, further comprising a power cable connected to said electrical connectors, said power cable adapted for electrical connection to the product.

10 7. A security mounting assembly as in claim 2, further comprising an access opening in said shroud into said cavity, and means for covering said access opening to limit access to said cavity.

15 8. A mounting assembly as in claim 7, wherein said covering means comprises a cover plate.

9. A mounting assembly as in claim 7, wherein said covering means comprises a portion of the product.

20 10. A mounting assembly as in claim 7, wherein said covering means comprises said sensor.

11. A mounting assembly as in claim 3, further comprising means for restricting rotation of said electrical connectors.

5 12. A mounting assembly as in claim 11, further comprising an access opening to said shroud and a cover plate over said access opening, and wherein said means for restricting rotation comprises a pair of wings on said cover plate that extend on opposite sides of said electrical connector.

10 13. A mounting assembly as in claim 1, wherein said shroud comprises a flange, and said fastener extends through said flange and the sensor to thereby attach said shroud and the sensor to the product.

15 14. A mounting assembly as in claim 13, wherein said seat for receiving the sensor comprises a post on said flange, the sensor having a hole for receiving said post, and said fastener extending through said post.

15. A mounting assembly as in claim 2, wherein said shroud has a pedestal portion, and said cavity being at least partially within said pedestal portion.

16. A mounting assembly as in claim 15 further comprising a base have
a holder for receiving said pedestal.

17. A shroud for housing at least one electrical connector on a security
5 cable, and for fastening a sensor to a product, said shroud comprising:
a cavity containing the at least one electrical connector;
an access opening to said cavity for installing the electrical connector in
said cavity;
at least one passageway for receiving the security cables;
10 a seat for receiving the sensor; and
a cover for said access opening of said shroud to limit access to said
electrical connectors.

18. A shroud as in claim 17 adapted to receive a fastener for fastening
15 the shroud to the product, said shroud further comprising a bore for receiving the fastener,
said bore extending through said seat and said cover.

19. A mounting apparatus for a retail product display, comprising:
a security sensor having a cable;
20 an electrical connector on said cable;

a shroud having a seat receiving said sensor and a compartment receiving
said electrical connector;

a fastener extending through said shroud and into the product and fastening
both said sensor and said shroud to the product.

5

20. A mounting apparatus for a retail product display, comprising:

a security sensor having a cable;

a shroud having a seat receiving said sensor and a compartment receiving
said electrical connector;

10

a grommet on said cable and removably held in an opening in said shroud;

and

a fastener extending through said shroud and into the product and fastening
both said sensor and said shroud to the product.

15

21. A mounting apparatus for a retail product display, the product having
an electrical power input, comprising:

a security sensor;

a main cable carrying a security circuit and electrical power for the product;

a sensor cable connecting said main cable security circuit to said sensor;

20

a power cable connected to said main cable for carrying power to the

product;

a shroud having a seat receiving said sensor and a passageway for receiving
said main cable; and

a fastener extending through said shroud and into the product and fastening
5 both said sensor and said shroud to the product.

22. A mounting apparatus as in claim 21 further comprising a pair of
electrical connectors, said main cable connected to one connector, and said security cable
and said power cable connected to the other said other said connector; said pair of
10 connectors being held within said shroud.

23. A secure electrical connection assembly for a product, comprising:
a mating pair of electrical connectors;
a first electrical cable connected to one of said pair of connectors;
15 a security cable connected to the other of said connectors;
a shroud having a cavity containing said electrical connectors, an access
opening to said cavity, and one or more passageways for said first and second cables;
a security sensor connected to said security cable; and
a fastener attaching said shroud and said security sensor to the product.

20

24. A secure electrical connection assembly for an electrically powered product, comprising

a mating pair of electrical connectors;

a main cable connected to one of said connectors, said cable carrying power

5 and a security circuit;

a security cable connected to the other of said connectors;

a power cable connected to the other of said connectors, said power cable adapted for electrical connection to the product;

10 a shroud having an opening for receiving said electrical connectors and a first opening at the bottom of said shroud for freely receiving said first cable;

a grommet on said first cable and removably held in said first opening in said shroud;

a sensor adapted for attachment to the product, said sensor connected to said security cable; and

15 a fastener for attaching said shroud to the product.
